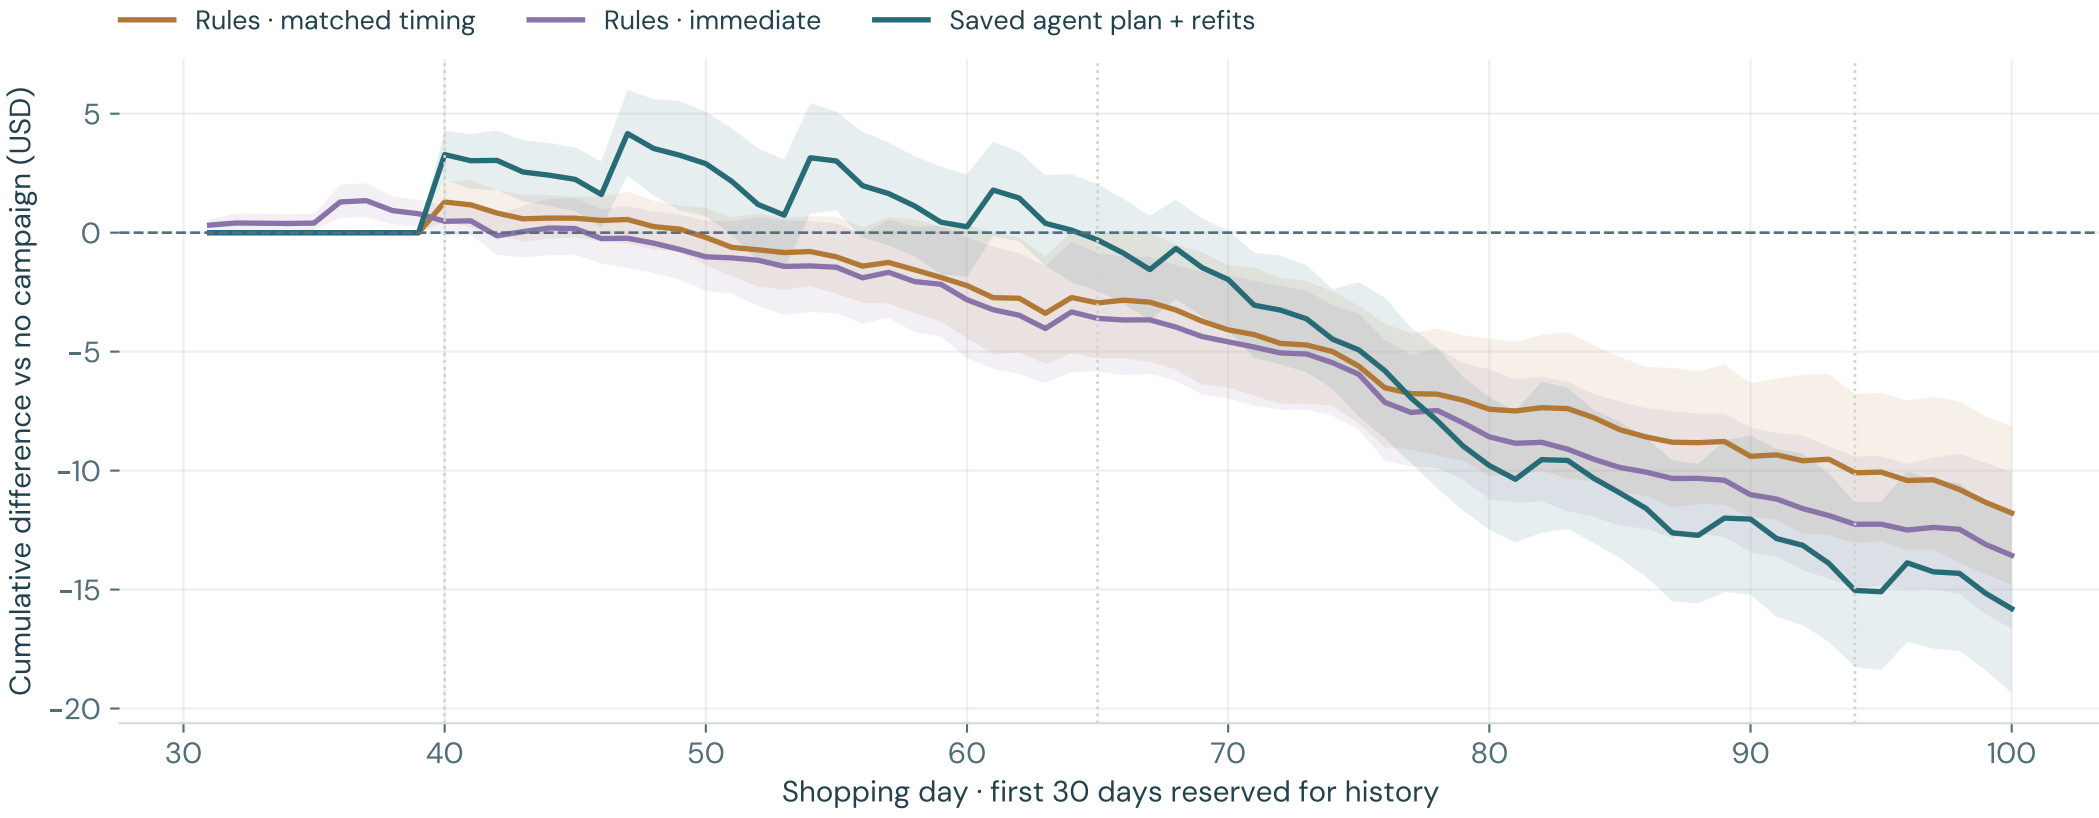
B · How value accumulates during the campaign

Fully matured sale cohorts, reconstructed after day 114 · pointwise 95% seed-cluster intervals



Dotted lines: saved plans become active on displayed days 40, 65, 94. Final review cost is allocated at the endpoint.
This is a retrospective outcome curve, not evidence available to agents during those days.

20 seed clusters × 5 fixed scenarios · 100 shoppers per world · simulator estimates
