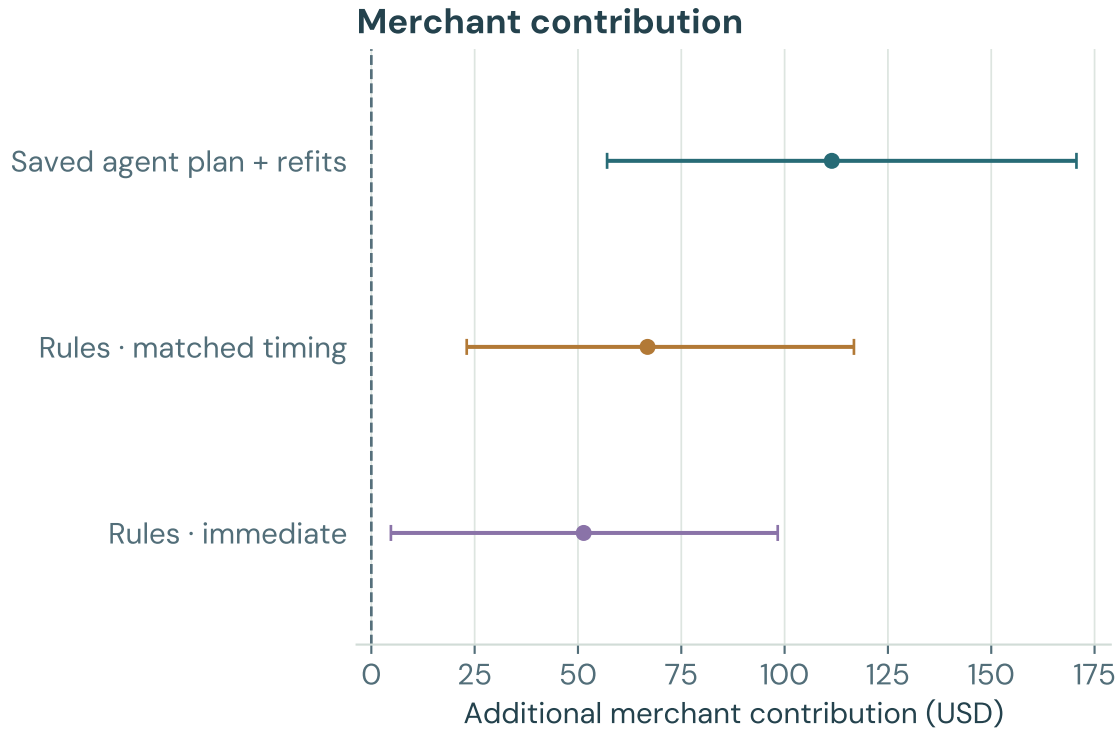
C · Merchant and shopper outcomes

Same paired worlds · a fixed day 30 lapsed cohort · 95% seed-cluster bootstrap intervals



Reactivation: had purchased before day 30, then inactive for ≥7 days, and bought again during days 31–100.
Count differences are simulator effects; they do not identify which real customers were saved from churn.

20 seed clusters × 5 fixed scenarios · 100 shoppers per world · simulator estimates
