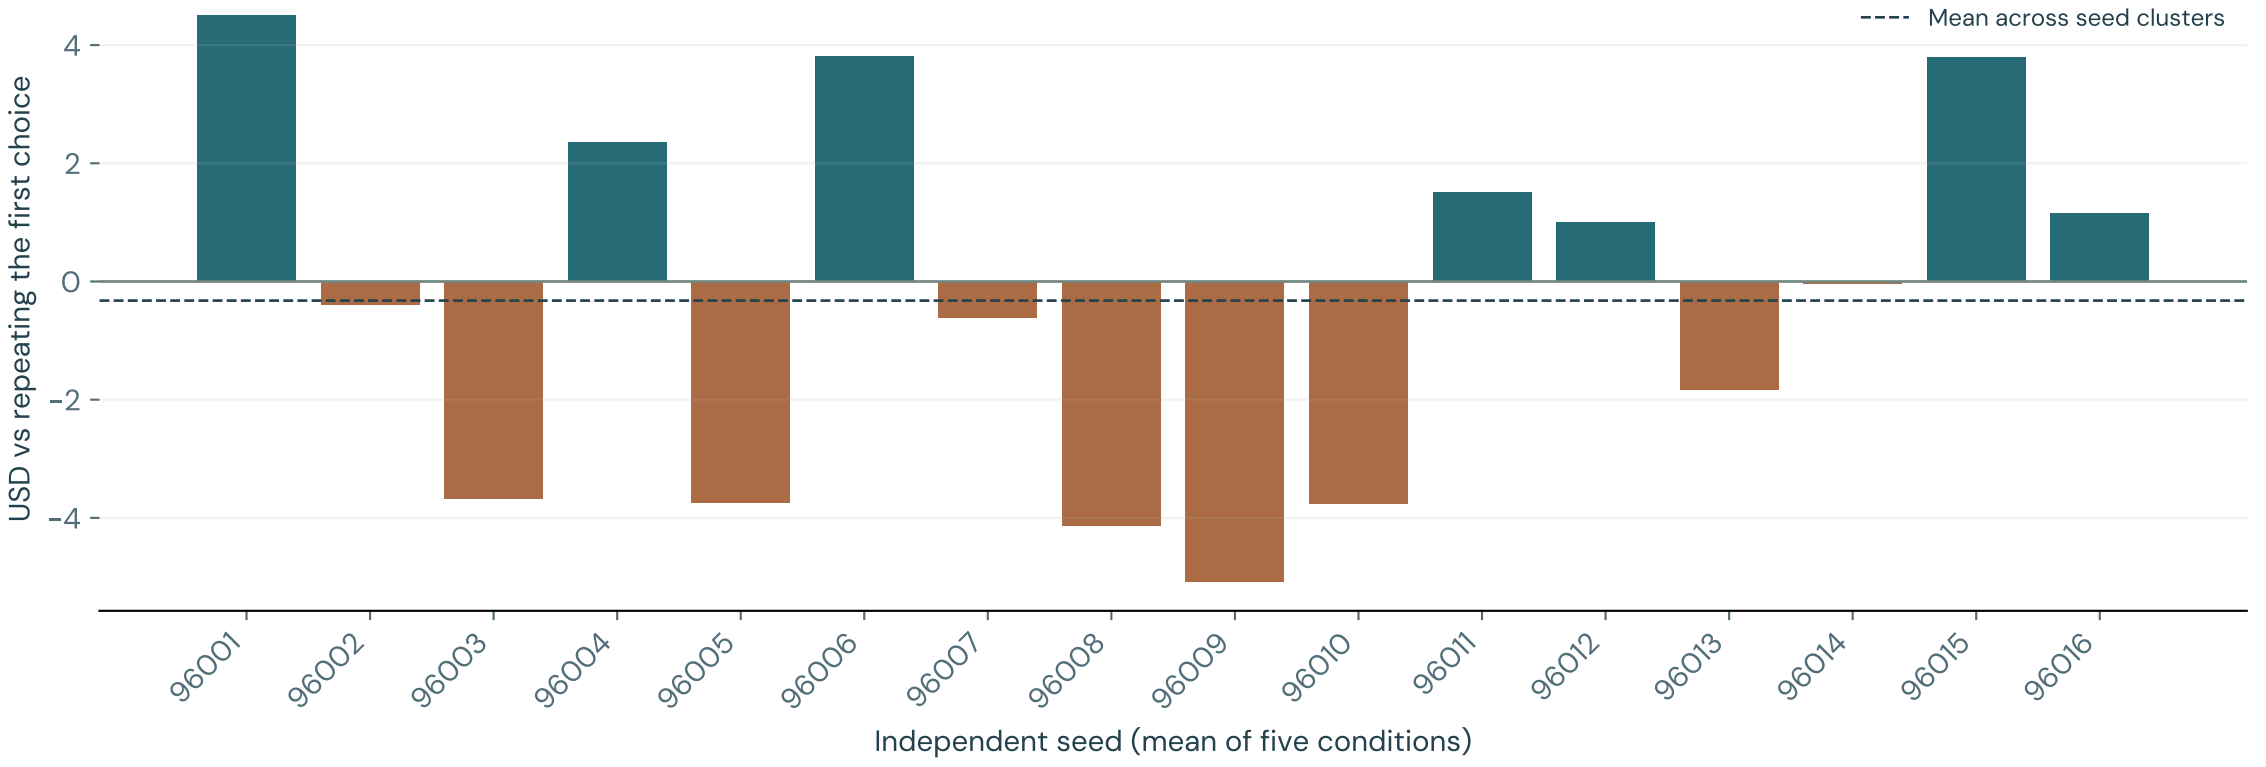
C · Do later revisions earn their extra cost?

Mean revision effect: $-0.323 · 95% interval $-1.730 to $+1.115



Adaptive controller: reviews on days 30, 55 and 80. Ablation: repeats day-30 policy and pays only its first model call.
Both use identical seeds, publication delays, tool authority and frozen accounting. This is an ablation, not a learning curve.
