Market Metro: from shopper activity to tested campaigns

V2.3

A. Market environment

Saved Day 32

Shoppers browse, buy and receive orders.

12 stores · 600 shoppers · paused during reviews

records

activity

B. How the LLM agent decides

LLM agent

Vertex AI

Uses market evidence to plan and improve campaigns.

Explore	Prepare	Try models	Compare	Plan	Refine
Find a sales gap	Choose useful data	Request local training	Choose a model	Propose a campaign	Use trial results
Saved	Saved	Saved	Saved	Saved	Saved

Each decision is saved with the evidence behind it.

Market activity · Earlier tests · Current campaign

run tests

test results

C. Data plane: what gets saved

Market records

AG Studio / SQLite

Orders, purchases and returns

Order	Merchant	USD
#708	M10	**$64.00**
#692	M4	$42.00
#693	M7	$96.00

Saved work

Models · **Plans** · **Decisions**

Every campaign links back to its evidence.

Receipts link to the same order.

D. Local tools and experiment sandbox

Learn from data

Analyze demand and train models

Compare prediction quality

Try the campaign

Replay separate test markets

Compare purchases and net value

Check and launch

Check costs, stock and merchant impact

Keep the current plan if checks fail

Before launch

The plan that was tested is the plan that runs.

Budget · Stock · Merchant impact

Apply the campaign to the market

E. PayPal Sandbox and performance review

Saved buyer → **Test payment** → **Receipt**

A selected market order gets a verified Sandbox receipt.

Test funds only. The receipt returns to the same order.

receipt

Measure the results

Fixed rules / one agent / team

Sales, PayPal net, merchant value, AI cost

Final scores never feed the agent.

The agent chooses what to investigate and test. Local tools measure the outcome and control what changes in the market.

Actual saved environment · simulated shoppers and economy · selected PayPal Sandbox receipts
